

the bleed screw

essa may ranapiri

Poems about historic pain

from a workshop manual.

1. SLAVE CYLINDER

The flesh lubricated by
hot blood clamped
bearings of cartilage
fit along spigot
they got suspended along
the bridge
two corpses to
fit where one living body
would have chewed
on the beams of a
ship (the BROOKES), new bushes in
an ocean of servitude (the ATLANTIC)

2. WITHDRAW THE DOMED COVER

Fix my eyes

into cylinders

there are an unusual amount
of lenses
convex and concave the vanishing point
of wage

they are dancing in a coal mine
wearing feathers in hopes of flight

damper
reservoir

clean dust operating
without
a
switch

3. PARTS FOR REPAIR

If your [REDACTED] is not operating satisfactorily, look over the installation and see that it is properly made in accordance with the following instructions.

Find these ingredients:

O 65%/C 18.5%/H 9.5%/N 3.2%/Ca 1.5%/P 1.0%/K
0.4%/S 0.3%/Na 0.2%/Cl 0.2%/Mg 0.1%

Then mix till water, fat, muscle and bone form.

They will stand their in a skin you covered them with.

Bid for the best and strongest / the beast and hardest.

What is the worth of a life? Price tagged behind the ear.

Repeat to successful.

A [REDACTED] is a very delicately adjusted instrument, and must be handled carefully, be properly installed and looked after to insure continued satisfactory service.

4. REFITTING

en_slaved

by flowers

all automaton

5. BRUTE FORCE

A cast-iron mass pass their lives, from the moment they are able to go 'til they drop worn out in the hinge, without any other change or relaxation than is furnished by sickness, without being fed the coiling purr of pistons, indebted solely to the forbearance or good temper of the engine - overheat and the screw will starve.

6. REMOVE THE BATTERY

plantation of mechanics

the oil fountain blossoms

a whole community

to foil

remove

heart plate

place in the

soil [i found

a seed that

: smelted the

Styx and left

it there

7. INSTALLATION AND CARE

Apply pressure to cog so that it retains its momentum.

Throw all books into a pool of pitch - trim back the cornea.

Pinch welts and break lesions.

Teach only the enterprise the machinery can't anything but its nature as machinery.

Make ideas sloth in oil.

Ensure that slave like devotion of conveyor belt spin

never stop. The cogs slip the nylon over trundling movement.

NOTE: To stop is a death blow.

8. DIFFERENTIAL CAGE

Remove the flywheel
& replace the lungs
with nails bolts
of life made cosseted
such a shape to
fill a box 5 by 5
squeal in a tin can
sinking
its edges bloodied
with rust
